## **DETAILED ACTION**

### **Specification**

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For example, in lines 5-7, the use of "which virtual transmission path" is not clear. In addition, lines 10-16 are not easily understood.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claim 1 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Conoscenti et al. Conoscenti et al. discloses a method that employs both a virtual path identifier (VPI) and a virtual channel identifier (VCI) in the administration of an ATM network. The network is composed in part by broadcast sources, subscriber terminals, as well as the physical ATM network that supports the communication between them (See Figure 1). Conoscenti et al. employs the VPI to identify the broadcast source. The VCI identifies channels that are distributed by the broadcast source. In this manner, the VPI represents a group of subscribers assigned to a particular broadcast source. Similarly, the VCI forms a subgroup that represents subscribers who are provided access to the same channel by a specific broadcast source (See Column 2, lines 57 to 65).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Du (Patent No. 5,600,795) is cited for its disclosure of a method to control ATM networks that identifies the various subscribers and uses VPI/VCI to establish connections.

Opher et al. (Patent No. 5,345,558) is cited for its disclosure of ATM networks in point-to-multipoint arrangements.
